FOCUS ON CUSTOMER SATISFACTION

We strive for progress
to ensure your success

Enjoyment at work creates efficiency at work

A library is a dynamic environment. It should offer the freedom to relax and meet people, the option to discover something new and the opportunity to promote personal development. A library should be an inspiring environment while at the same time provide a peaceful atmosphere. It should be a pleasant space in which you can move around comfortably, knowing that the information you require can be easily found. Library shelving systems form an important aspect of creating this dynamic.

Focus on flexibility

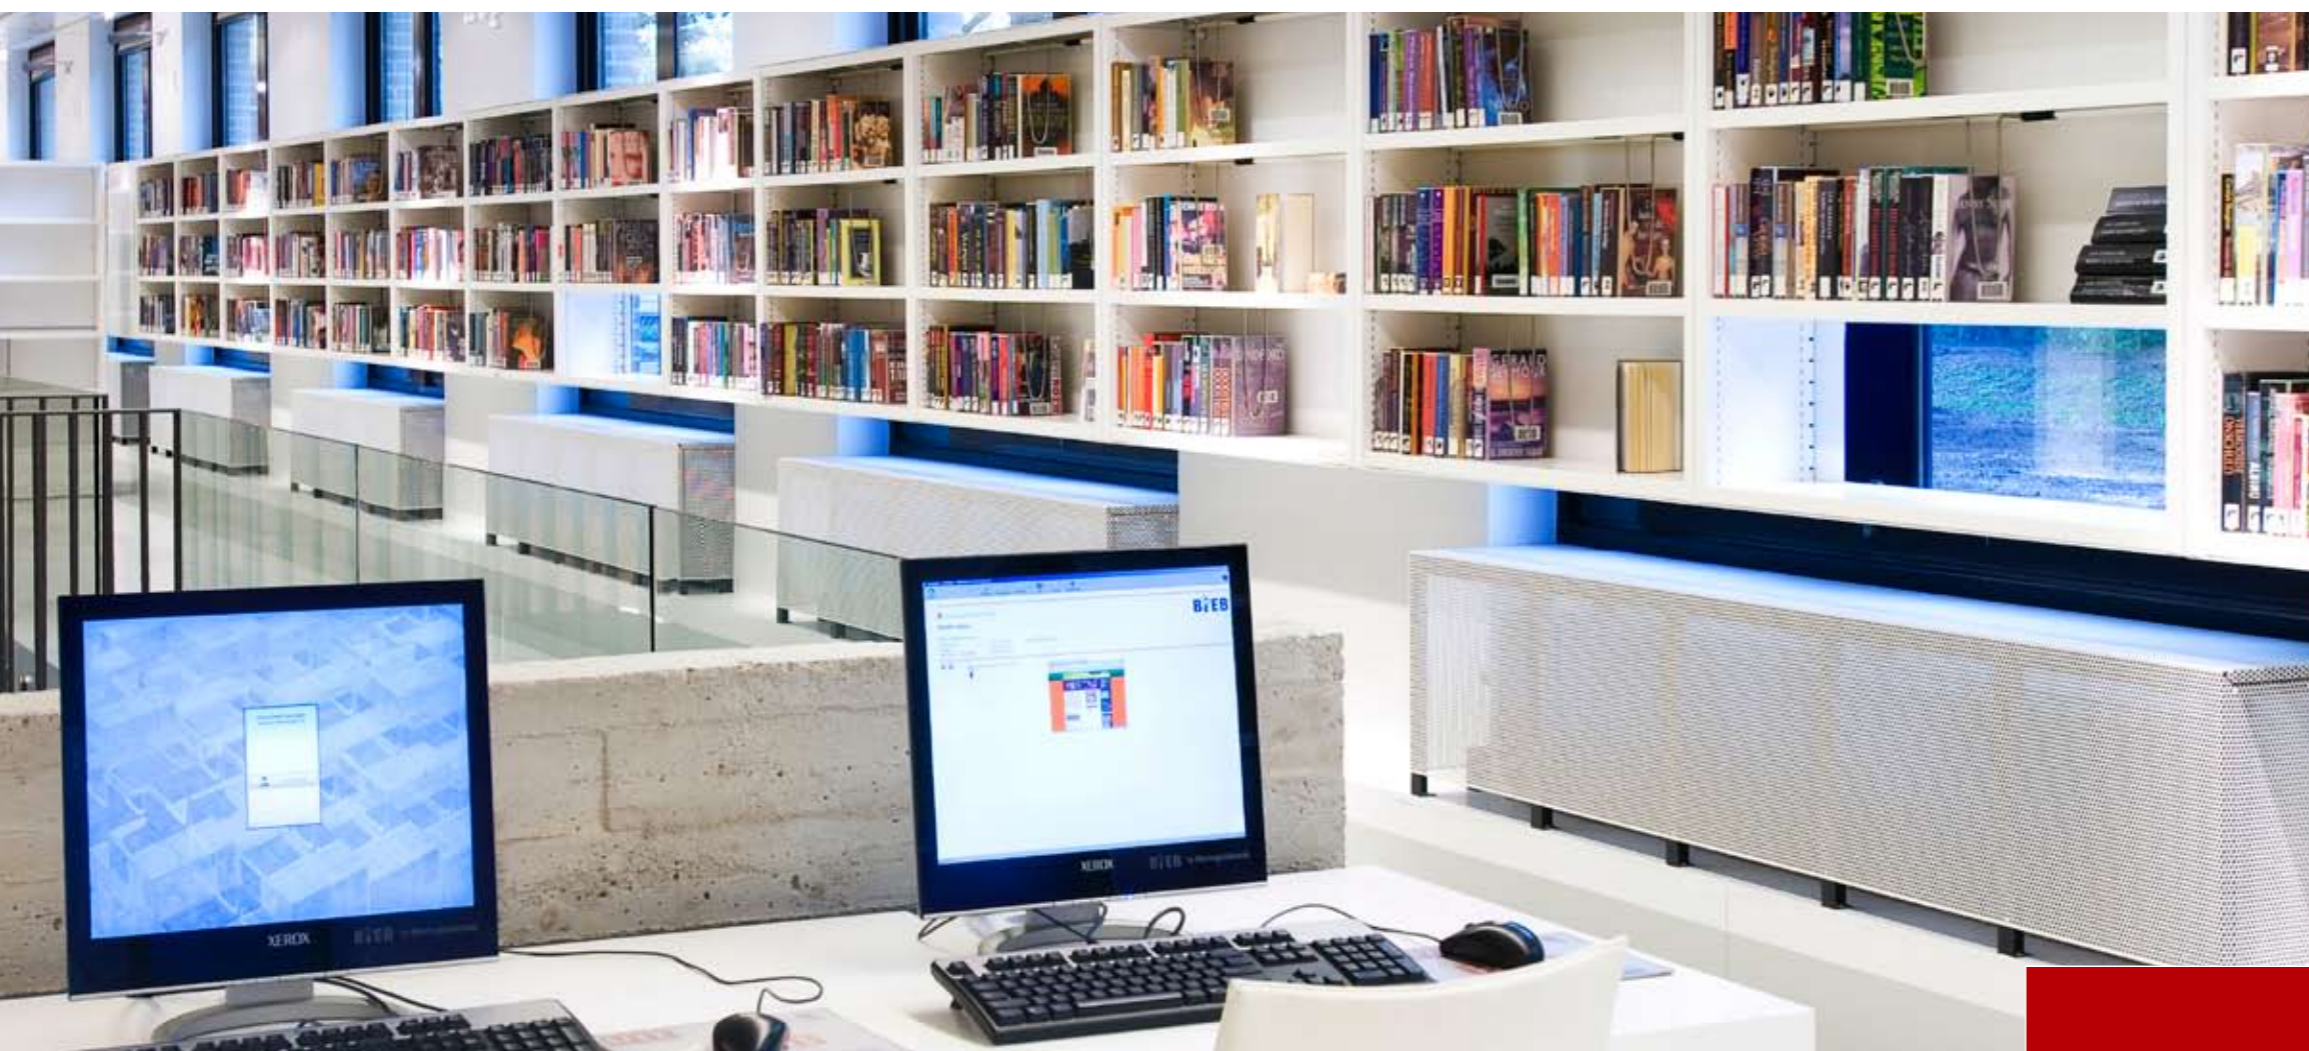

If you require the most efficient use of space, there are many benefits in using a library shelving system from Bruynzeel. We offer a high degree of dimensional flexibility to ensure that the optimum solution can be designed for any room, and for any purpose. A variety of upright types, panel finishes and colours offer possibilities that can be tailored to any budget. Is your requirement for a storage system in a repository, or for a department which holds infrequently accessed items? Then a space-saving mobile shelving arrangement may be the best solution. Requiring only a single access aisle, mobile shelving stacks can be moved either individually, or simultaneously to create an aisle wherever necessary. When the high cost of floor space is considered, it makes sense to maximise its use with a mobile shelving system and use the space saved either for additional storage or to create more study and reading areas.

Focus on sustainability

Library shelving systems from Bruynzeel are manufactured with due care for the environment. Our plant in the Netherlands is ISO 14001 certified and this certification means that we not only comply with the legislation and regulations concerning the environment, but we are constantly on the lookout to improve our performance. The appealing, flexible design and the durability of our shelving systems guarantee a high level of sustainability.

Focus on customer satisfaction

At Bruynzeel, we focus on customer satisfaction by helping to design the ideal solution for your library. A solution that is both space-efficient and aesthetically pleasing. A solution that both satisfies today's requirements and offers tomorrow's development potential. Whether you are designing a school or a university library, a private research centre or a public lending library, the design can be fully coordinated to suit the style and appearance required.

Discover our creative and space-saving solution.

Be inspired.

Sysco® Library

A pleasant environment
A pleasant atmosphere

Sysco® Library: bespoke design

The design of your library reflects your style to a large extent. The shelving can be finished with a glass, steel, or wood design in colours that complement the interior.

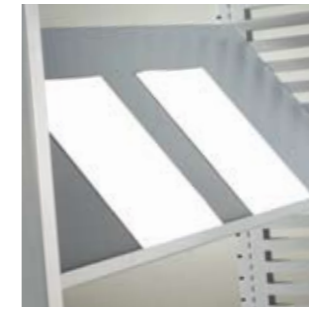

You can also go a step further, and choose a solution that emphasises your own style in an attractive way. Your logo can be incorporated into a panel, or you might prefer to have a unique image that reflects either your activities or the history of the premises, to help provide inspirational surroundings.

Sysco® Library: focus on acoustics

It is often the case that study desks, reading areas and storage facilities are located within the same room. It is important that people are able to read and study in a peaceful environment, and the right acoustics are important in this regard. Bruynzeel library shelving can be fitted with acoustic panels, which have noise-reducing properties that contribute towards creating a conducive atmosphere.

Sysco® Library

Quality at an affordable price

Sysco® Library: focus on functionality

If you work in a library, it is important that tasks can be carried out both efficiently and ergonomically. Our wide range of accessories ensures that all media can be stored in a well-organised manner; clear information signs ensure they can be quickly located. If you require to convert a section to Display shelves, our specially-developed shelf bracket enables any shelf to be easily slanted for presentation purposes. Thanks to the modular design, you can quickly re-position shelves or extend the system as required.

Sysco® Library: focus on quality

By choosing Bruynzeel, quality is guaranteed. We seek an open dialogue with our customers; this helps inspire us to develop and improve our creative solutions. As we have our own Research and Development department and an experienced team, we are able to tailor our products to your requirements and trends in the market. Our products are characterised by their high quality – fine-detail engineering, robust construction, durable finish.

Sysco® Library: focus on an affordable price

Would you like your library to have a modern appearance? Do you only have a limited budget available? No problem. The steel uprights are designed in such a way that no extra finishing is required. They can be supplied in several colours, and in different styles: plain, or perforated with round or slotted holes.

Compactus® Save space

Compactus® Systems: focus on space-saving storage

Mobile shelving is far more space-efficient than conventional static shelving. Sometimes called a moving-aisle system, the single access aisle is 'created' wherever it is required by moving the mobile book-stacks aside, either individually or all at the same time.

Three drive systems: Manual, Electro and Power³

Compactus® systems can be supplied with three different types of drive system: our mechanically-assisted Manual drive, our touch-controlled Electronic drive or our computer-based Power³ drive system. Whatever your mobile storage needs, a tailored solution is available.

Compactus® Manual: focus on functionality

Rotating the ergonomic operating handle provides swift and easy access to your collection. A wide range of accessories allows the all your media to be neatly organised and safely stored. You can select from an extensive range of finish options, from cost-effective chain box covers to eye-catching coloured glass with LED lighting.

Compactus® Electro: focus on ergonomics and safety

Thanks to the electronic control system, Compactus® Electro units are easy to operate and effortless to move, even with your hands full. The Motor Current Monitoring System (MCMS) and photo cells ensure the safety of users. Thanks to these features, the bases will stop immediately if another user attempts to move the system while a person is in the aisle. If electronics make our daily lives a little easier, why settle for anything less at work?

Compactus® Power³: Comfort+

Compactus® Power³: extra comfort, security and protection

Compactus® Power³ offers all the benefits of Compactus® Electro and more. The intelligent electronic control system of the Compactus® Power³ provides even greater functionality by offering, among other features, the option of security-storage for confidential information. Different shelving stacks can be assigned to certain persons or departments by means of programmable access keys. A Movement Detection system and an interface with fire safety and climate control systems offer even greater safety, both for you and the collection itself.

Compactus®

Enjoy the benefits of sustainability

Compactus® systems: focus on quality

Our products meet all the important international quality standards, awarded by independent experts. As RAL certificates have been awarded to our wide range of products, including the latest electronic solutions, Bruynzeel occupies a unique position in the market.

Compactus® systems: focus on sustainability

Bruynzeel is a market leader when it comes to Corporate Social Responsibility, and this means that Corporate Social Responsibility not only forms part of our day-to-day business but also relates to our products themselves. We would be pleased to assist you in achieving your goals in the area of sustainability by offering you durable products and saving floor space. We can also contribute towards creating a pleasant environment with our flexible design solutions.

Boijmans Van Beuningen

Compactus® systems: focus on customer satisfaction

The drive system is not the only aspect that enables you to select the solution that is best suited to your situation. Compactus® systems are available in a wide variety of dimensions, floor types, uprights and finishes. Our advisors would be delighted to help you optimise the use of your available space by designing a suitable system with the proper accessories, to meet your needs and aspirations.
